

Implant Appointments and Time for Extraction, Immediate Implant Placement with Strong Stability & Bone Graft

Appointment # 1: 30 minutes-1.0 hour.

Data Collection: Examination, take photos, models, x-rays, CBCT scan .

Appointment # 2: 30 minutes-1.0 hour.

1. Present Treatment plan, discuss risks, benefits, alternatives, costs, and review x-rays, photos, models, refer to specialists if you like to have second opinion.

Appointment #s 1, 2 can be combined with #3 if necessary.

Appointment #3: 1.5 - 2 hours.

1. Extraction, immediate placement of implant (**if adequate bone and primary stability allowed**) and bone graft
 1. For the back teeth like bicuspid and molars, nothing or a temporary denture can be placed at time of extraction. Then wait 4 months prior to placing abutment and permanent crown.
 2. For the front teeth like canines and incisors, a temporary veneer or crown on a temporary or permanent abutment or a temporary denture can be placed at time of extraction. Then wait 8-12 months prior to abutment and permanent crown. This allows time for the gum to mature and mold into the right shape for permanent crown.

Appointment # 4: 1 hour

Place permanent custom abutment, take impression, send to lab

Appointment # 5: 1 hour

Deliver or cement permanent crown.
